Summary

I am a Full-Stack Software Developer with a postgraduate degree in Software Development from ISEP. I worked extensively with **Spring Boot** to build the backend. Designed and exposed **RESTful APIs**. Followed Domain-Driven Design to structure the business logic around core domain concepts. I ensured maintainability and scalability by adhering to **SOLID** principles and implementing Onion Architecture. For data persistence, I used relational databases with **JPA** and **Hibernate**, and I ensured code quality through unit testing with **JUnit** and **Mockito**. To support deployment and development workflows, I used **Docker** to create images and run containers for the applications, and I managed version control using **Git**.

I actively apply these skills in both professional and personal development contexts, continuously refining them through hands-on experience and side projects available on my GitHub profile. My background in veterinary medicine has strengthened my analytical thinking, discipline, and structured approach to solving complex problems.

Education

Postgraduation Software Development - SWITCH 2023-2024

Instituto Superior de Engenharia do Porto

- **Topics:** Spring Boot, Object Oriented Programming, RESTful API, Domain Driven, Design, Test-Driven Development, SOLID princípios, SQL, Onion Architecture, JUnit, Mockito, React, Docker,
- **Skills:** Unified Modeling Language, Git, Scrum.

Master Degree Veterinary Medicine 2015-2022 *Universidade de Évora*

Work Experience

VeriCasa Sept. 2024 - Jan. 2025 *Full-Stack Developer*

- Actively participated in the development and operations of an AI-powered platform designed to streamline real estate transactions by automating legal documentation processes.
- Was responsible for developing tools to perform rapid analysis of property documents, allowing users to efficiently generate detailed legal reports and sales contracts.
- Contributed to improving existing solutions by refactoring and modularizing code components, enhancing the platform's reusability, maintainability, and scalability.
- **Technologies:** TypeScript, React, Tailwind CSS, Python, Git, UML, Postman, REST API, Figma, Jira.

VertsaPlay Jan. 2025 - Present *Software Developer*

- Actively participate in the development of modular and logic-driven game systems focusing on high performance and delivering a smooth, engaging player experience.
- Was responsible for building reusable and scalable game components, contributing to clean and maintainable code architecture.
- Integrated individual components into complete game experiences, implementing real-time client-server communication to support interactive gameplay features.
- Developed an internal asset management tools to support the design team, streamlining workflows and improving productivity.
- **Technologies:** JavaScript, Godot Engine, Git, REST API, WebSocket, Figma, Jira
